MONTHLY WEATHER MAP

METEOROLOGICAL SERVICE, DOMINION OF CANADA

OCTOBER 1935

TEMPERATURE

The mean temperatures for October were below normal throughout Canada and Newfoundland except along the lower St. Lawrence River, in the Laurentian Highlands in Ontario and Quebec and the region of the lower Great Lakes. There were also local exceptions in the extreme southwestern corner of Saskatchewan and in the foothill valleys of Alberta.

On Vancouver Island the mean temperatures were normal in the south to one degree below in the north. Along the coast of the mainland temperatures ranged from normal along the inner channel to four degrees below normal in the north. In northern British Columbia there were deficiencies of two to four degrees while in the southern valleys the temperatures were normal to two degrees below. Near the close of the month the temperatures fell to a lower point than had ever before been recorded in October.

Mean temperatures in Alberta were two to four degrees below normal south of the Medicine Hat-Calgary line. In the Calgary-Edmonton foothill region there were deficiencies of one to two degrees. In the Red Deer and Battle River valleys temperatures were normal to two degrees above while in the North Saskatchewan River valley there were deficiencies of one degree generally. Temperatures ranged from two degrees above to two degrees below normal in the Athabaska River valley and were generally normal in the Peace River valley.

In the extreme southwest corner of Saskatchewan there were excesses of two to three degrees while in the region from Scott and Battleford to the Alberta boundary temperatures were normal to two degrees above. Elsewhere in Saskatchewan there were deficiencies of one to three degrees generally.

In the grain belt of Manitoba mean temperatures were normal to two degrees below with local exceptions. In the lake region and northern Manitoba there were deficiencies of three to four degrees except in the region about Le Pas where there were slight excesses.

In Rainy River district and the western part of Kenora district in Ontario there were deficiencies of one to two degrees. In the remainder of northern Ontario temperatures were normal to two degrees above except locally on the shore of Lake Superior, on Manitoulin Island and in Sudbury district where there were deficiencies of one degree.

In southern Ontario the mean temperatures were generally normal to two degrees above excepting the lower Ottawa River valley and on the Height of Land between this region and Lake Ontario where there were deficiencies of one to two degrees.

In Quebec along the upper Ottawa, upper St. Lawrence, in the Laurentian hills and along the lower St. Lawrence temperatures were normal to one degree above. In the lower Ottawa River valley, the middle St. Lawrence lowlands, in the Gaspé Peninsula, and along the north shore of the Gulf there were deficiencies of one to two degrees. In the Lake St. John region temperatures ranged from one degree above to one degree below normal.

Along the Maine boundary mean temperatures were generally a little higher than normal in New Brunswick but elsewhere were normal or lower. In Nova Scotia around Chignecto Bay, in portions of the Annapolis Valley, and in the extreme southwest the deficiency was one to three degrees. Elsewhere in Nova Scotia as well as in Prince Edward Island temperatures were practically normal.

Along the western coast of Newfoundland there were deficiencies of one to three degrees while elsewhere temperatures were normal or higher.

Along Hudson Strait the temperatures were nearly normal but along the western coast of Hudson Bay there were deficiencies of three to six degrees.

PRECIPITATION

The precipitation was below normal on Vancouver Island by from 5 to 45% and 30% generally. In the northern part of the province excesses of about 5% were reported while in the southern river valleys excesses of 20% were generally noted.

In the Peace and Athabaska River valleys there were excesses of 20 to 55%. In the Edmonton-Calgary foothill region and southward to the American border total precipitation ranged from normal to three times the normal amount. In the region between Lloydminster, Stettler and the Saskatchewan border precipitation was normal to 40% below and 15% generally while in the extreme southeast corner of the province there were defects of 33%.

In Saskatchewan south of Swift Current, Last Mountain and Kamsack the October precipitation was normal to 60% below normal and 30% generally. North of this region there were excesses of 10 to 100%generally.

In both the grain belt and lake region of Manitoba there were deficiencies of 10 to 90% and 50% generally.

In Rainy River and Kenora districts in Ontario there were deficiencies of 15 to 45% and 25% generally. The remainder of northern Ontario had excesses of 35% generally but twice or more than twice the normal amount was recorded immediately east of Lake Nipigon while in Sudbury district there were deficiencies of about 25%. In southern Ontario deficiencies were of the order of 15 to 65% and 40% generally.

Along the lower Ottawa River valley and its lower tributaries and along the upper and middle St. Lawrence there were deficiencies of 20 to 80% and 50% generally. However, in the region of the upper St. Maurice the rainfall appears to have been very erratic with very heavy falls at some points on the 12th and 21st. In the Rouyn district and in the Lake St. John and Saguenay region there were excesses of 20 to 50%. In the Gaspé region and on Anticosti Island there were deficiencies of about 50%.

In New Brunswick there were deficiencies of 60 to 80% while in Nova Scotia the deficiency averaged 50% and was slightly greater along the Atlantic coast. Cape Breton Island and Prince Edward Island had deficiencies of 20 and 45% respectively. In Newfoundland there were excesses of 50 to 80% reported.

A. J. CONNOR

SPECIAL REPORTS

NOTE—Column H is Highest Temperature; Column L is Lowest Temperature; Column P is Precipitation in inches; Column I denotes total of bright sunshine in hours during the month; Column Tm is the mean temperature of the current month; Column Sg denotes depth of snow on ground in inches, where given.
